

Fact Sheet

Manufacturer:

iTeres Group, LP

Category:

Natural Gas

Deployment:

The application is deployed on client-owned server, browser-based

Technical Specs

User Interface:

- Javascript, JQuery
- ASP.NET
- MVC 3 using Razor View Engine
- CSS
- IIS 6.0 or newer
- Active Directory integration and authentication
- Cross-browser compliant

Business Logic:

C++

Database:

SQL/Server

iTracker

Reduce the cost and increase the accuracy of researching anomalies in wellhead volume measurements.

For gas producers, and for the buyers of that gas, the volume information at the wellhead is the cash register of the business. It is critical that volume information be carefully scrutinized. iTracker adds intelligence to the process of identifying anomalies, facilitates the process for researching and resolving those anomalies, eases the process of interacting with the counterparty, and provides a wealth of status information via a highly intuitive dashboard. Additionally, iTracker provides an easy-to-use, auditable mechanism for randomly selecting wells for review.

Features

- ✓ **Uses data directly retrieved from client's current systems**
 - Able to receive and analyze data from gas management systems
 - Able to accept data from multiple systems
 - Flexible integration methods
- ✓ **Dashboard reporting**
 - User can see at a glance the current status for that month's volume information
 - Instantly identify most significant anomalies for analysis
 - Flexible parameters for flagging possible anomalies

The logo for iTracker, featuring a stylized 'i' with a red dot and a grey circular arrow around it, followed by the word 'Tracker' in a serif font.

Features (continued)

✓ Random selection capabilities

- Extensive ability to randomly select wells for special attention:
 - Gas quality audits
 - Measurement audits
- Simple integration into work management systems to deploy audit tasks
- Configurable selection parameters based on business rules

✓ Integrated communication mechanisms

- Contact documents and graphics automatically generated
- Able to email producers directly from application
- Integrates with standard MS/Office applications (Word, Outlook, Excel)

✓ Incorporated audit and tracking capabilities

- Able to bookmark a well for review at a later time
- Detailed audit trail

About iTeres Group

iTeres was founded on a philosophy of delivering results-oriented consulting services and expertise across many industries. The foundation of iTeres is service first, externally with our clients and internally among peers. Our people are among the very best in the technology industry and are recognized as leaders in various technologies and disciplines.
